NET WEIGHT = 25LBS/11.34KG

A growth and flowering formula with a vigorous dose of secondary elements and fully chelated micronutrients.

GENERAL DIRECTIONS FOR USE

- Mix 4.5 grams per gallon or 0.99 pounds per 100 gallons to be applied during growth.
- Make sure pH is adjusted between 5.5 - 6.5 after nutrients are mixed into solution for optimal results.
- Limit of solubility = 1.5 pounds per gallon

IMPORTANT NOTES

E.C. value is the best method to determine fertilizer strength. E.C. value assumes using RO water. For best results, stir thoroughly with warm water. Some raw materials are slower to dissolve than others. Keep stock tank covered to reduce light and debris.

Feeding instructions are compatible with continuous and intermittent feeding programs. Desired concentrations will vary depending on weather conditions, temperature, precipitation, drought, soil composition, water pH and cultivar vigor.
